

NetPwr Power Unit Product Summary

NetPwr's Power Units produce *Clean - Green - Baseload* energy at extremely low operating costs that can be easily transported and installed anywhere on the planet.

We have incorporated the latest technologies: the Quantum Magnetic Generator ("QMG") and Solid-State Graphene Batteries ("GSB") to produce a "Plug and Play" clean power unit, that produces no emissions, uses no toxic chemicals, and has a zero-carbon footprint.

NetPwr is powered by a Quantum Magnetic Generator that provides a constant power using an energy generation method known as "magnetic flux" as its fuel source and it includes energy storage to provide to provide extra power during peak hours and can be used as emergency back-up power for at least 1-2 hours run time.

- **Unrestricted:** Install anywhere on the Planet
- **Baseload:** Constant power, 24/7
- **Clean:** No fuel, No consumables
- **Zero Carbon Footprint:** Carbon Credits
- **Portable:** Installed and operating within a day.
- **Affordable:** Low operating cost
- **Long Life Span** 50+ years
- **Power Density:** Same as Diesel Generators.

NP05 – 5kW power unit with Additional on board 10kWh energy storage

NP20 – 20kW power unit with Additional on board 40kWh energy storage

NP100 – 100kW power unit with Additional on board 200kWh energy storage

NP350 – 350kW power unit with Additional on board 700kWh energy storage

NP500 – 500kW power unit with Additional on board 1000kWh energy storage

NP2000 – 2MW power unit with Additional on board 2MWh energy storage

Disclaimer: All specifications are subject to change without notice. All operating parameters, including typical parameters must be validated for each customer application by the customer technical experts. Pictures are for illustration purposes only. The actual unit may differ.
